Medi-CliniQ™ - Aerotel's Telehealth Kiosk System

- Easy to use self-contained medical monitoring station
- Includes software and medical sensors
- Intended for multiple-patient use
- Can be operated by little-trained medical staff or even by the end users (patients)

HRS = Heartline Receiving System.
MPM = Medical Parameters Monitoring

Used in remote areas, where regular healthcare services are scarce or difficult to approach

- Rural clinics
- Small general hospitals
- Mobile settings – ambulances
- Home visits
- Independent living facilities
- Flying doctors
- Mining and construction sites
- Tourist resorts
- Pharmacies
- Ships
- Military installations
- Prisons

Easy to use and inter-operable

- Intended for self-check and easy operation
- Fast and reliable measurements
- Light-weight to support mobile settings
- Flexibility to use any existing communications infrastructure
- Automatic transmission to remote hospital/call center
- Integration with hospital information systems (HIS)
- Integration with electronic health records (EHR)

Main Benefits

- Critical time savings
- Eliminating distance barriers
- Access to expert medical service even in remote areas
- Multiple users can be monitored from one location
- Information is available to professionals via the internet
- Integration with other health systems (HIS/HER)
- Requires very small investment with fast return

Successful Implementations and On-going Trials

Conclusions

- The Telehealth Kiosk provides significant clinical and economical benefits
- Brings healthcare to remote places
- Saves costs and resources
- Easy to use and cost-effective
- Many successful installation and experience learned
